

Scenario DSL v2 — Variable 3-tier exposure

Tier A — Theoretical constant

```
code:luvoire.theory.rat.v1
```

Locked. YAML cannot redefine the convergence rule.

Tier B — Empirical prior

```
source: "KOSTAT 2024 Time Use Survey"
```

Required source metadata; value or distribution.

Tier C — Exploration knob

```
guardianship_density: range [0.1, 0.9]
```

Required range and default; sweep-friendly.

CI lint enforces tier-specific keys; replay hash invariants are unchanged.
